

6 high-tech SUVs that can rule the road

When it comes to hitting the road in style, pick an SUV that's sophisticated like these vehicles

businessinsider.in

The recently concluded New York Auto Show was all about SUVs. SUV demand is booming and the trend is likely to keep going. But not all SUVs are created equal. Here is a roundup of all the top SUVs with the most advanced features:

The **2017 Lincoln MKX** comes with several semi-autonomous features, like park assist, which can locate open parking spots and help you reverse into them. There are also four cameras on the car so you can always see your entire surroundings. You can use a corresponding app to start, lock, unlock, and locate your vehicle remotely.

The **Volvo XC90** comes with four hidden cameras to provide 360-degree views when driving and parking. It comes with an autonomous emergency braking system and semi-autonomous features that allows it to accelerate, decelerate, stop, and steer itself below 30 mph.

Range Rover's SVAutobiography is a luxurious SUV with a surround camera system. You can open the trunk just by waving your hand. It has two rows of seats—the second row has a massage function and can recline. There's also a folding table that comes out of the centre console and a fridge for keeping drinks cool.

The **Tesla Model X** has a sleek exterior with its sweeping, falcon wing doors. The best part of it is the autopilot feature, which lets the car steer, brake, and even change lanes for you while driving on the highway. A front facing camera mounted at the top of the windshield helps identify pedestrians and read speed limit signs.

The **2017 Mitsubishi Outlander PHEV** is able to detect pedestrians and blind spots to prevent accidents. It can detect incoming vehicles from behind for when you're reversing. The car comes with three drive modes: electric, hybrid and parallel hybrid, and is capable of selecting the best drive mode based on the road conditions.

If you're looking for a good crossover SUV, **Audi gave its 2018 Q5** a significant upgrade. The car has 30 different ambient light options and fits five inside. It also has 30 different semi-autonomous features from cruise control that can operate in heavy traffic to lane-keep assist to prevent drift.
